

## TRS RAINWATER PRODUCTS

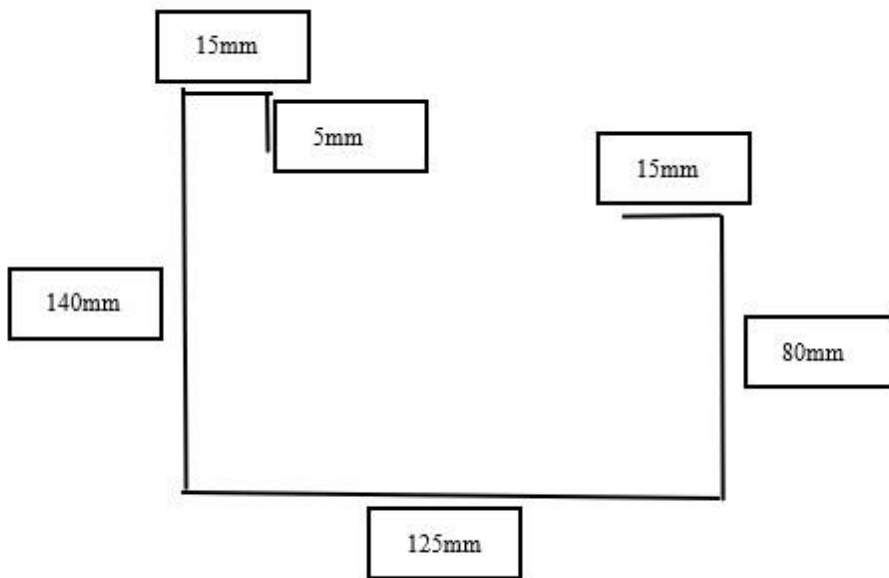

### A. GUTTER

#### 1. Box gutter (125/ 175/ 300) mm:

The TRS Box Gutter is specially designed for heavy rainfall that leads to requiring only fewer down pipes. Also, with its modern touch in the design and quality, it makes your home or building look modern and contemporary. This box gutter includes internal and external brackets that obscures the ends of roof iron and is also suitable for use with Metal line Fascia.

- Vitor + ZX
- LUX
- EURAMAX

**Installation Procedure:**

It can be supplied either without installation or with installation basis. Our certified installation team can help with the installation or we can refer to other installation teams depending on the site of installation.

## 2. Rainwater Head

Rainwater heads are an important aspect of architecture for buildings that use internal boxes or trough gutters. A rain head or sump is a tub that is placed between the gutter and the downpipe to allow water drain away from the roof. It serves as an alternative diversion point for rising water

surges into the storm water system and letting the water flow down the downstream pipes. Since rain heads are located outside, the possibility of water leakage inside a building is minimized. In severe conditions, the addition of an overflow clause provides much better protection from stream leakage. TRS Rainwater heads supply and installs rainwater heads to compliment any rainwater system.

### Color Range
